Edmonton, AB | +1 (780) 238-7344 | joshasiegbu@gmail.com

PROFESSIONAL SUMMARY

Technical and operations-focused professional with a background spanning IT support and wireline systems within the oil and gas industry. Began career in IT support before progressing into engineering roles, developing a solid foundation in troubleshooting, technical problem-solving, documentation, and operational support. Brings a hands-on approach to technology, with ongoing self-driven projects that reinforce practical skills and support day-to-day workflows. Recognized for strong teamwork, adaptability, and analytical thinking, with the ability to perform effectively across both office and field environments.

SKILLS

Tech Stack: Python, Go, Vanilla JavaScript, HTML, CSS, Windows, Linux

IT Support & Troubleshooting: IT Support, Systems Troubleshooting, Service Desk Support, Remote Support, Hardware and Software Support, Computer Hardware Installation and Configuration, Printer and Scanner Support, Networking Basics, Network Policy Deployment

Soft Skills: Critical Thinking, Analytical Thinking, Problem Solving, Teamwork, Communication, Adaptability, Time Management, Organization, Cross-Functional Support, Ability to Work Under Pressure, Intellectual Curiosity, Solution-Oriented

TRAINING & CERTIFICATIONS

- Data Science & AI Course – Intellipaat
- Google Data Analytics – Coursera
- Leadership and Emotional Intelligence
- JavaScript for Web Development – Udemy
- Warrior Data Acquisition Software

WORK EXPERIENCE

Field Engineer, BG Technical Ltd – Wireline Product Line

Feb 2022 – Mar 2026

- Delivered cased-hole and open-hole wireline services in line with client objectives and company standards.
- Executed wireline operations including perforation, cement bond logging, and pipe recovery.
- Assisted with tool checks, pre-job function testing, calibration, and post-job reporting.
- Coordinated field operations including job planning, resource allocation, risk assessment, mobilization readiness, and post-job review.
- Supervised wellsite preparation and tool string makeup, ensuring compliance with technical programs and safety procedures.
- Interpreted and validated logging data in real time, supporting decision-making and clear technical feedback to clients and internal stakeholders.
- Monitored and recorded wellsite activities while ensuring adherence to HS&E standards.
- Provided technical support during troubleshooting and operational decision-making.
- Prepared technical reports and supported troubleshooting during field operations to reduce non-productive time and maintain service quality.
- Developed a LAS (Log ASCII Standard) file repair tool which improved field setup efficiency.

- Diagnosed and resolved software, hardware, and network-related issues across the organization.
- Enforced IT security compliance and supported secure day-to-day technical operations.
- Managed IT asset inventory and coordinated vendor repair and installation activities.
- Supported end users through troubleshooting and issue resolution in a fast-paced operational environment.
- Leveraged self-taught Python skills to build lightweight scripts for continuous port monitoring and host availability checks, making routine support work easier and improving early visibility into connectivity and service disruptions.

PROJECTS

LAS Converter | Python and Tkinter Project

2025

- Built a small Python-based LAS converter to address inconsistencies in LAS files generated by different acquisition software. Engineers previously used Excel to manually adjust values and file structure as a workaround; the tool automated that process, reduced manual rework, and saved engineering time. With further improvement, the utility could be expanded with broader format validation and support for additional acquisition sources.

GitHub User Search | Go Lang and GitHub Web API Project

2026

- Built a simple project to deepen practical understanding of API usage and web-based interaction. The project retrieves a GitHub user and displays their latest repositories, strengthening familiarity with request handling, data retrieval, and presenting API response data in a usable format. With further improvement, it could be expanded to support filtering, profile comparison, and richer repository insights.

EDUCATION

B.Sc. Computer Science, Madonna University**2017**
